

The English
Chapmans and Travellers
ALMANACK
For the Year of Christ,
1 6 9 7.

Wherein all the Post-Roads, with their several Branches and Distances, the *Marts, Fairs, and Markets* in *England and Wales*, are *Alphabetically* disposed in every Month; so that the Place *where*, and the Days on *which* any of them are *kept*, is immediately found out.

To which is added
A TABLE of ACCOUNTS
READY CAST UP,

for the *Buying or Selling* of any *Commodity*, by *Number, Weight, or Measure*, from *One Farthing* to *Ten Pounds*:
and of any *Quantity*, from *One* to *Ten thousand*.

W I T H
A *Sun-Dial* and other TABLES
and things, Useful for all Travellers, Traders,
or Chapmen whatsoever.

A L S O,

The *Rising and Setting* of the *Sun and Moon*,
the *Tides*, and whatsoever else is necessary for an Annual

A L M A N A C K

LONDON, Printed by *Tho. James* for the
Company of STATIONERS, 1697.

	29 11 12	0 48
	30 12 0	0 0

IN the Fifth Column of this *Almanack*, you have the *Age* of the *Moon* standing against every day in the Year by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the *Moon* will be just in the *South*, either evening or morning.

II. How many hours and minutes she will *shine*, either at night or next morning.

III. At what time the *Moon* riseth or setteth.

IV. The *hour* of the *night* by the *shadow* of the *Moon* upon any *Sun-Dial*.

I. To find at what time the *Moon* will be due *South*.

Example, Upon the 22d. of *March*, the *Moon* being the 10 days old, I would know at what time the *Moon* will be upon the *Meridian* or *South*.

Look in the first Column of this *Table* for 10, the *Moon* *Age* increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the *Moon* will be just *South* in the evening.

II. To find how long the *Moon* shineth.

Example, Upon the 18th of *March*, the *Moon* that day

being 6 days old, I would know how many hours and minutes she *shineth* that night.

Look for 6 (the *Moons age*) in the first Column of this Table, and right against it (in the third Column) you shall find 4 hours 48 min. and so long will the Moon shine that Evening, because the Moon increaseth.

III. To find at what time the Moon Riset and ~~Setteth~~.

1. If the Moon be increasing, that is, if she be less than 15 days old, *add* the hours and minutes of her *shining*, to the hours and minutes of the *Suns Rising*, and the sum will be the time of the *Moons Rising*. But,

2. If the Moon be decreasing, that is, if she be above 15 days old, *subtract* the hours and minutes of her *shining* from the hours and minutes of the *Suns Rising*, and the remainder will be the time of the *Moons Rising*.

For the Moons Setting.

1. If the Moon be less than 15 days old, *add* the time of her *shining* to the time of the *Suns setting*, the sum is her *setting*. — But

2. If the Moon be above 15 days old, *subtract* her *shining* from the *Suns setting*, the remainder is her *setting*, adding or subtracting 12 hours if need be.

IV. To find the hour of the Night by the *Moons Shadow* on a Sun-Dial.

Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12; which take from the time of the Moons coming to the South, the remainder is the hour of the Night. But if the Shadow be past 12, add those hours to the coming to the South, and the sum is the hour of the Night.

Example. Upon the 5th. of April, the Moon being 13 days old, and comes to the South at 20 h. 24 m. and that Night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the Night. — But if the Shadow had been 2 h. 30 m. after 12, those added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the Night.

January hath XXXI. Days.

Derby	13	Llanibithor	3	Salisbury	6

The Use of the SUN-DIAL.

For the ready finding of the hour of the Day by this Dial, you must provide a streight Staff or Ruler, which must first be divided into Ten equal parts, and then each of those into ten other smaller parts, so will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, &c. to 100: And so is it fitted for Use,

Now when you would find the hour, you must erect your Staff or Ruler perpendicular, that is, set it upright upon some plain level ground, floor, or table, and note the place where the end of the shadow did fall, and with your Staff measure the length of the shadow in Staves lengths, and hundred parts of the length, according as 'tis numbred.

Example. Suppose that upon the 16 day of January I do erect my Staff perpendicular, and measuring the length of the shadow thereof, I find it to be exactly 3 times its length; wherefore, finding the 16 day at the top of the month of January, I find 3, 0 to stand against the 16 day, and at the top find XII, which tells me it is then just 12 a Clock. — *Example 2.*

Suppose that upon the 6 of May I erect my Staff as before, and measuring the shadow thereof; I find it to be twice the length of the Staff, and 24 parts more; wherefore, I look at the top of the Dial in May, for the 6 day, and casting my eye along that line, towards the right hand, I find 2, 24, to stand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. — *Example 3.*

Upon the 16 of April, I find the length of the shadow to be once the Staffs length and 30 parts more; I look in April for the 16 day in the Sun-Dial, and in the line against it for 1, 30, and against it in the fifth Column I find 1, 33 (which is the nearest number nearest to 1, 30, in the Table) over which there stands IX and III, which shews that it is almost 9 in the morning, or a little after 3 in the afternoon. — *Example 4.*

Upon the 26 of June I find the length of the shadow of the Staff to be once the whole length, and 20 parts; if I look for this number 1, 20, in the Sun-Dial against the 26 of June, I can find no such number, but the nearest to it less in that line is 1, 01, over which stands IX, III, and the nearest number to it, greater, is 1, 38, over which stands VIII, IV; so that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon. A little practice will make all this plain: For *Ufus optimus Magister.*

Attemans true Spirit of Scurvey Grass, both Plain and Golden, so long famous for the cure of the Scurvey, Gout, Dropsie, and other Chronical Diseases; are still prepared by John Hooker in Pauls Chaine near Dollers Commons. Price One Shilling the Bottle.

Things necessary for Chapmen to know.

A Dicker of Hides or Skins of Leather, 10 Skins	In a Rod of Land, 40 Perches
A Chaldron of Coles, 36 Bushels	In a Perch of Land, 272 ¹ / ₂ Foot
A Load of Timber, 50 Solid Foot	In a Perch, Pole, or Rod in Length only, 16 ¹ / ₂ Foot
In a Hoghead of Wine, 63 Gallons	A Bale of Paper, 10 Reams
In a Barrel of Beer, 36 Gallons	A Pipe or But of Wine, 126 Gallons
In a Barrel of Ale, 32 Gallons	In a Last of Corn, 10 quarters, or 80 Bushels
A Grofs, 144 or 12 Dozen	A Tun of Iron, 20 hundred weight or 2240 pound weight
A Weigh of Cheese, 256 Pound	A Fodder of Lead, 19 ¹ / ₂ hundred weight, or 21 ³ / ₄ pound
Days in a Year, 365	A Tod of Wooll is 28 Pound,
Weeks in a Year, 52	A Sack, 364 pound
In a Rowl of Velam or Parchment, 60 Skins	A Last, 4368 ponneds
In a Ream of Paper, 500 Sheets, or 20 quires	A Load of Bricks, 500 Bricks
A Tun of Wine, 252 Gallons	
In an Acre of Land, 160 Perches	

By knowing the price of the Pound Weight of any Commodity in Farthings, to know the price of the great Hundred (or 112 l. weight.)

For every Farthing that One Pound doth Cost,
 reckon Two Shillings and One Groat.
 And that's the price of the Great Hundred weight.

10000	416	13	4	458	6	8	500	0	1000	0

The Number of Pounds, Yards, Ells, or the like, to be bought or sold.

The Use of the Table of Accounts.

THIS Table will serve for many good purposes, but it is here principally intended for the Chapmans use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, &c. And its use is very easie; as by

EXAMPLE I.

At 9 d. the Yard, what will 70 yards come to?

Look for 9 d. at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, and under 9 d. you shall find 2 l. 12 s. 6 d. And so much will 70 Yards at 9 d. the Yard come to.

Also, *At 5 d. the Gallon, 500 Gallons will come to 10 l. 8 s. 4 d.*

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and adde them together, and the sum shall answer your Question.

EXAMPLE II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

	l.	s.
70 Dozen at 7 s. comes to	24	10
8 Dozen at 7 s. comes to	2	16
	<hr/>	

The Sum 27 06

So that 78 Dozen at 7 s. the Dozen, come to 27 l. 6 s.

EXAMPLE III.

At 3 s. 5 d. 3 q. the Ell, what will 300 Ells come to?

	l.	s.	d.
300 Ells at 3 s. comes to	45	0	0
300 Ells at 5 d. comes to	6	5	0
300 Ells at 3 q. comes to	0	18	9
	<hr/>		

The Price of 300 Ells 52 3 9

EXAMPLE IV.

At 7 d. halspeny the Pound, what will 92 Pound come to?

	l.	s.	d.
90 Pound at 7 d. the Pound, comes to	2	12	6
2 Pound at 7 d. the Pound, comes to	0	01	2
90 Pound at a halspeny, comes to	0	03	9
2 Pound at a halspeny, comes to	0	00	1
	<hr/>		

The Price of 92 Pound, at 7 d. 2 q. 2 17 6
